Master Planting Design for Parma Heights, Ohio

Revised January 2024

A master planting design is intended to give guidelines for planting the future urban forest. The information contained in this document is based on data collected in an Urban Site Index survey conducted in the fall of 2023.

Change is constant. Nurseries are developing new and better selections of trees than the ones available at the time of revision. Individual planting sites are being impacted by construction and human activity. The climate is in transition. Tree species selected at the time of revision may become less suited for the site selected and new species not appropriate at time of revision may become appropriate. The master planting design needs to be a living document evolving over time, adapting to the changing conditions.

The segment index is arranged in the streets' alphabetical order and the approximate block in ascending order. When the block number is zero, there were no house numbers on the segment, all the planting sites are in side yards. The first cross street is the northern or western end of the segment. The second cross street is the southern or eastern end of the segment. When a number is used for a cross street the segment begins or ends at the house number.
